

Total Recall VR Monitor

Powerfully expanding your Call Recording System

*Total Recall VR **Monitor** is a powerful PC application, which provides multi-channel real-time monitoring of recordings in progress, automatic monitoring based on configurable criteria, instant call recall, call search & replay, and multi-channel event recreation.*

*Easy to use, with visual waveforms when monitoring, playing back or creating multi-file 'events', Total Recall VR **Monitor** extends the functionality of your Total Recall VR system.*

Total Recall VR Monitor offers:

- Multi-channel real time monitoring of recordings in progress on multiple Total Recall VR systems simultaneously.
- Real-time metadata and waveform display of recordings in progress and recordings being monitored.
- Auto-monitoring criteria to automatically initiate monitoring of recordings that match the criteria.
- Waveform lingering with visual indication of audio on multiple channels.
- Browsing of recordings in Total Recall VR archives that are stored on discs, USB devices, network drives, Total Recall VR 'Mega Archives'.
- Browsing of recordings that are stored on Total Recall VR systems with automatic fetching of latest recordings.
- Integrated e-mail client for fast sharing of recordings in any supported file and audio format and search queries.
- Integrated audio player with built-in visual waveform and integrity check for recordings that are stored in the TRC file format.
- Integrated event creator and player with built-in visual waveform.
- Recording management: delete, annotate, tag, lock, etc.
- Integrated email client for rapid sharing of recordings.

- User configurable and flexible role based access control for all application features and recordings.
- Two working modes: workstation (multiple users on a single PC) and workgroup (multiple users on multiple PCs).
- Creation and management of Public Folder archives with unlimited number of records and role base shared access from multiple PCs by multiple users.
- Automatic detection (plug and play) of archives on discs, USB devices and network drives.
- Advanced natural language search query builder for saving of queries to files, recall of queries from files and sharing of queries via e-mail.
- Flexible (selected, found, all, etc.) batch export of recording metadata to CSV format for use in reporting tools.
- Flexible (selected, found, all, etc.) batch export of recordings to standard audio file formats (incl. MP3 & WAV), compatible with standard audio player applications.
- 'Lock' recordings to prevent deletion.
